

BLUEBERRIES

Require another variety to insure good pollination and fruit set.

Tifblue - Berries are medium to large and light blue. Berries ripen in early to mid-season (mid-June). (rabbiteye)

Powder Blue - Powder Blue has reliable crops of large berries because of its spring frost resistance. The light blue, firm fruit hang in clusters, resist cracking and hold a sweet flavor. The shrub is vigorous and upright. Ripens in mid-late season (rabbiteye)

Premier - crops are produced with the distinctive powdery blue color on the large firm berries. The flavor is excellent, and the berries store well. The plant growth is vigorous and upright. Ripens mid-late season. (rabbiteye)

Columbus - An early to mid-season producer. Excellent color and flavor. Produces a large berry.

STRAWBERRIES

Strawberries are self fertile and do not require another variety to pollinate. Varieties are good for eating fresh or freezing.

Earliglow – (early bearing) The glossy firm fruit are highly sweet making them wonderful for fresh eating, jams and freezing. The plants are great for the home owners being vigorous with plenty of runners and are resistant to red stele, leaf diseases and Verticillium wilt. Ripens in late May-June

Jewel – (mid-season) bright red and glossy. The berries from this compact grower have an excellent flavor and enticing aroma that is great for fresh eating or freezing. They are also firm enough to be inserted into beautiful fruit arrangements. Disease-resistant and cold hardy. Ripens in June.

Albion- (Everbearing) produces very large fruit that is very firm and red. To get high yields this variety will need a strong water and nutrient program.

MUSCADINES

Ison – Black self-fertile variety, excellent size, production, taste and quality. Edible skin, large clusters and disease resistant. Ripens early to mid-season. Makes great jelly, juice, and wine.

Late Fry – Bronze self-fertile variety. The latest ripening variety available. Large fruit size, very vigorous, high yields. Cold hardy, edible skin, disease resistant. Ripens late season.

BLACKBERRIES

Triple Crown - A unique flavor that has garnered rave reviews! This productive plant yields berries that offer a tasty blend of sweetness and tartness. The fruit is borne uniformly, so it is easy to pick. Heat-tolerant. Ripens in early August. Self-pollinating.

Natchez - One of the first producers of the season. This disease-resistant, cutting-edge variety will give you large, sweet berries each year. Fruit stores well for extended time. Ripens in early June. Self-pollinating.

GRAPES

Concord (Seedless) - Concord Seedless grapevine is very similar to Concord Seeded except it is seedless and has a sweeter flavor. This grapevine variety is excellent for pies, jellies, jams, juice and fresh eating.

FIGS

Celeste - Most cold hardy variety. Flesh is white to rose color. Skin is purplish brown. Known as best fig for its size. Has a complex sweetness that leaves a pleasant aftertaste. Excellent for canning and preserving. Trees grow to large size..

Brown Turkey- An everbearing favorite. This fruit is delicious fresh or after being dried for tasty treats. Keeps well. Heat-tolerant. Ripens in June. Self-pollinating.

APPLES

Pink Lady - The medium to large apple has an attractive pink blush. It is across of Golden Delicious with Lady Williams. The crispness and sweet-tart flavor keeps well in storage and actually is best after 4 weeks. The flesh resists browning when cut, so it is great for fresh eating and salads, as well as for cooking and baking. Ripens in late October.

Gold Delicious - A russet-resistant selection of the original Golden Delicious. One of the most widely planted apple cultivars worldwide. Fruit is firm, medium to large with the classic Golden Delicious flavor. The tree is spreading, productive and easy to manage. Fruit thinning is required to maintain annual bearing.

Enterprise - Developed by Purdue University, this is a late-maturing, deep red apple with good keeping qualities. Fruit is uniform and medium to large in size. Tree is vigorous and spreading, with good annual bearing habits. Enterprise™ is highly resistant to fire blight and cedar apple rust. It is becoming an important processing variety.

ASIAN PEARS

Hosui - A solid russeted Asian pear with pronounced lenticels. Ripening in late August, fruit is mildly flavored, sweet and juicy. Tree is vigorous and spreading. Requires thinning to attain maximum fruit size.

Olympic - Large, round heavily russeted brown Asian pear. Has a crisp and juicy texture.

Shinsui- Shinsui is ready to harvest mid-August. Fruit finishes with an orange-brown russet. Fruit is juicy and has an excellent flavor for the early season. Fruit will keep up to six weeks.

PEACH

Reliance - Well known for its cold hardiness, this variety is ideal for northern climates where peaches are not typically grown. The fruit is medium sized, freestone, with a dull blush over greenish-yellow background. Good for canning and freezing.

NECTARINE

Emeraude – White flesh nectarine. Fruit is large and highly colored with excellent firmness. Tree is vigorous and resistant to bacterial spot.

PERSIMMON

Fuyu Persimmon- large orange, persimmon rates high in flavor and production. Nonstringent

ORANGE QUINCE TREE

A small spreading tree with multiple trunks valued for its fruit and beauty. Prized for its large crops and bright aromatic fruit.
